Permission to Register for COSC 5395 Graduate Project

A graduate project is the culmination of your studies for a Master of Science in Computer Science, and as such should be a substantial undertaking. It will consist of individual work by the student that will require approximately 6-10 weeks of full-time work effort. In addition to the actual work, the student will produce a written report that will include a thorough survey of the appropriate literature and an adequate description of the work itself.

Before registering for COSC5395, the student must find a faculty member to serve as the committee chair. Also, the Chair must approve the topic prior to registration. This form must be signed by the student and the Committee Chair prior to registering for COSC5395.
